December 3, 2012. Roseburg, OR – Willowood USA announced today that the EPA has approved both its technical and end-use registrations for Willowood Paraquat.

Willowood Paraquat 3SL is an effective, fast acting non-selective contact herbicide that provides control of annual and certain perennial weeds in a number of key crops including but not limited to: corn, soybean, wheat, rice, potatoes, cotton, sugar beet and sugarcane.

“The Willowood Paraquat registration further expands our established herbicide product portfolio.” states Brian Heinze, Willowood USA President & CEO. “Paraquat is an ideal herbicide for conservation and no-till systems.” added Heinze. “Along with being an excellent choice for resistant weed management, Willowood Paraquat 3SL rapidly binds to soil particles and does not have a negative effect on groundwater or soil organisms.”

With this recent registration, Willowood USA continues to set the pace as one of the fastest growing generic crop protection companies in the industry.

Willowood USA is a U.S. based manufacturer of post patent crop protection herbicides, fungicides, insecticides, plant growth regulators and spray additive products for the agriculture and vegetation management industries. For more information on the complete line of Willowood USA products, go to www.willowoodusa.com.
