TEB 3.6SC

TEBUCONAZOLE | FUNGICIDE

BENEFITS

- Cost effective disease treatment
- Suspension concentrate (SC) formulation is easy to handle
- Mode of action C14-sterol demethylation inhibitor (DMI)
- Absorbed through leaves and blossoms
- Steady, reliable disease control
- Curative and preventative disease activity
- Excellent crop safety

Teb 3.6SC is a broad spectrum systemic fungicide for winter and spring crops of wheat (excluding durum), barley, oats, rye and oilseed rape; also field beans, cabbages, carrots, horseradish, leeks, linseed, parsnips, and turnips

A locally systemic fungicide, Teb 3.6SC fungicide forms the basis of resistance management programs.

Teb 3.6SC fungicide also offers flexible use rates and a short 12-hour reentry interval.

- Teb 3.6SC fungicide provides unsurpassed protection against powdery mildew.
- Teb 3.6SC fungicide enhances control of Botrytis bunch rot.
- Teb 3.6SC fungicide is a sterol demethylation inhibitor (DMI), which is a foundation for resistance management when used in combination with a strobilurin fungicide.
- Teb 3.6SC fungicide effectively controls brown rot from first bloom to pre-harvest
- Teb 3.6SC fungicide enters blossoms and leaves and is absorbed into plant tissue, resulting in more consistent disease control

TEB 3.6SC FUNGICIDE
